

# *protoCELL*

Qualify  
processes quickly

LAS offers semi-automatic solutions, based on the **protoCELL**, for fast and cost-effective start into pilot series productions. As a rule, only those assembly steps are automated that cannot be carried out manually, such as punching, screwing and welding operations. The individual parts of the product to be assembled are usually inserted by an operator.

The **protoCELL** basic machine with pneumatic drive is ideal for the qualification of new processes and for testing new products.
