

smartCELL

Cost-saving
and compact

The **smartCELL** is a compact, cost-saving basic machine with short delivery times. Equipped with a pneumatic drive solution and appropriate accessories, the **smartCELL** is fully matched to the assembly and inspection of sub-assemblies or products. The different criteria, such as the number of individual parts and processes as well as the required assembly performance are of course taken into account without forgetting the place of use. Thanks to its reduced space requirement of less than one square meter the **smartCELL** can be installed almost everywhere or integrated in existing production lines without any problems.

Field of use

- for part requirements up to 30 parts/minute
- assembly and inspection of sub-assemblies or products composed of 2 to 4 components
- 100 % inspection of a product on one or several tracks
- optimised for integration in existing production lines
