

*work*CELL

Assembly and Machining in one single machine

The new **workCELL** completes our family of compact and cam-controlled high speed assembly machines with the associated machining of your products. Parts are fed in, assembled and machined fully automatically.

The energy-saving **workCELL** base machine is equipped with precision tool holding fixtures and in combination with tried and proven process units can handle up to 60 parts per minute. Examples of machining processes include drilling, grooving and countersinking, each incorporating direct chip disposal.
